Futuristic View of Washington-on-the-Potomac

This air view of the eastern Georgetown riverfront and adjacent Foggy Bottom indicates the routes of three expressways and the sites of three major building projects, the Cultural Cen-

ter, Columbia Plaza Urban Renewal area and the Watergate development. The Inner Loop's west leg will tunnel beneath the intersection of Virginia and New Hampshire aves. The E

st. Expressway will cut north of the State Department's 2-block-square building, at top center, and reach the City's surface street system near the Interior Department.
